

Air leakage

Air leakage accounts for up to 15% of heat loss in buildings during winter.

The diagram below shows the possible sources of air leaks in a standard home.

To maximise the benefit of the insulation installed in your home keep air leakage to a minimum. This will significantly reduce your fuel bills.

RULE OF THUMB

First identify where air leakage is occurring and then take steps to eliminate these areas. Refer over the page to identify some solutions to these problem areas.
